CASE STUDY

Boosting 20% Closing Monthly with a Modernized Title Solution for a US Software Company

HIGHLIGHTS

- Improved productivity with **20% more closings monthly.**
- **66% faster releasing cycle**, with regression testing cycles decreased from approximately 6 days to 2 days.
- **Successfully migrated 150,000 legacy title orders to the SaaS platform** without any data loss.
- **Defect leakage dropped from 8% to 0%.**
- Automated tests achieved **a pass rate >94%, 34% of all tests were automated, <5% flaky tests,** and achieved **<2% defects**.

THE CONTEXT

As insurance businesses face greater complexity, more data, and higher demands for speed, AI and automation have become essential. Automating routine tasks with Agentic AI helps organizations boost productivity and responsiveness. According to Gartner, 69% of insurers see strong value in applying agentic AI to customer service, while 61% identify underwriting as a key area where it is highly effective[1].

Beyond productivity gains, organizations can reduce inefficiencies and lower long-term operating costs. If companies prepare their workforce and rethink how work is done, automation could unlock up to 2.9 trillion USD in economic value in the United States by 2030[2]. This value comes not only from working faster, but from working smarter with fewer resources and greater resilience.

THE CLIENT

Founded in 1991, the client is a Texas-based software company delivering title and escrow management solutions to the real estate industry in all 50 states. With over 20 years in the market, its software is used daily by thousands of title insurance professionals. The platform supports the entire closing process, including order processing, escrow accounting, document imaging, transaction management, e-signing, and vendor integrations, covering all workflows required to close real estate transactions.

BUSINESS NEEDS & CHALLENGES

For years, the client's title production system made sure everything was accurate and delivered on time in a fast-paced environment. As the industry moved toward modern, cloud-based solutions, new challenges appeared - especially in closing document workflows and the overall platform setup.

Closing disclosure collaboration

The client's platform already handled settlement statements, document templates such as the Closing Disclosure Form (CDF), and included a visual editor for documents. They needed a more collaborative and reliable process, as any delays in the title closing process can directly impact closing timelines.

Cloud challenges

Moving to a cloud-based platform allowed faster updates, more integrations, and new features. However, quality control needed to keep up, since every release could impact thousands of users. Testing was time-consuming, and each new feature added more work. Additionally, scanning and indexing documents continued to take a long time per file.

Migrating large volumes of customer data

To successfully upgrade the platform, the client had to migrate a large volume of historical orders and documents from their old systems to the new cloud platform without losing any data or disruptions. Thus, the company needed a secure, scalable migration process, as this historical data was crucial to their title operations.

WHY FPT

As a long-term partner of the client's parent company, FPT was chosen for this project thanks to:

- Proven expertise in mortgage and title insurance technologies as well as cloud solutions.
- A vast and scalable workforce of 3,000+ BFSI engineers, with 500+ and growing insurance-related certificates achieved.
- Practical, in-depth knowledge of mortgage and title insurance workflows, especially regarding closing documents, settlement processes, and title production, which are critical in fostering trust.

THE SOLUTIONS

In this project, FPT restructured and modernized the client's Title Closing Solution. This included:

01 Enhancing Closing Disclosure Form (CDF) Editor

FPT enhanced the document production layer supporting closing-critical outputs, specifically the Closing Disclosure Form (CDF) and settlement statements, within the broader settlement and reporting capabilities. This initiative complemented the platform's document templates and visual editor to strengthen accuracy, collaboration, and readiness.

02 Building a cloud title production foundation

Configurable workflow engine:
To reduce manual coordination and enable repeatable work across agencies, FPT implemented workflow-driven orchestration using a configurable workflow engine. This workflow helped teams execute title and escrow operations more consistently, using workflow patterns that reflect real user processes.

Rigorous testing:
FPT strengthened quality by combining disciplined manual coverage with scalable automation:

- Manual testing emphasized standardization and traceability through structured operations with measurable outcomes, such as reducing leakage.
- Automated regression testing was fully integrated into the release process to maintain speed without increasing risk.

03 Migrating customers' data

FPT preserved data ownership and continuity by transforming legacy orders and documents into the cloud platform's structure, which allowed the customer to adopt the new system without losing critical data history.

THE VALUES

After the partnership, FPT helped the client achieve remarkable results:

Improved productivity

With more flexible process templates, tasks were automatically created and routed as soon as documents were uploaded. Instead of tracking everything manually, the staff now worked from a guided, rules-based queue supported by real-time dashboards. This helped the team ***improve efficiency by 20%***, allowing them to handle more closings each month without needing extra effort.

Faster release cycle

Regression testing time ***dropped from about six days to two days***, making software updates quicker and more reliable. Manual testing also improved, ***reducing the number of issues that slipped through from 8% to 0%***.

Reliable and scalable systems

The system maintained ***a pass rate above 94%, fewer than 5% flaky tests, 34% of all tests automated, and fewer than 2% of defects missed***. This gave the client confidence as their platform grew and new features were added.

Secure data migration

FPT ***migrated 150,000 legacy title orders*** to the new cloud platform without data loss, ensuring a smooth transition for customers and maintaining trust.

ABOUT US

FPT Corporation (FPT) is a globally leading technology and IT services provider headquartered in Vietnam and operates in three core sectors: Technology, Telecommunications, and Education. Over more than three decades, FPT has consistently delivered impactful solutions to millions of individuals and tens of thousands of organizations worldwide. As an AI-first company, FPT is committed to elevating Vietnam's position on the global tech map and delivering world-class AI-enabled solutions for global enterprises. FPT focuses on three critical transformations: Digital Transformation, Intelligence Transformation, and Green Transformation. In 2025, FPT reported a total revenue of USD 2.66 billion and a workforce of over 54,000 employees across its core businesses.
